

SCHAUMANN LICK

For a secure mineral supply

Pasture as well as roughage is not always able to meet the requirements of cattle for mineral nutrients and trace elements on their own. Seasonal fluctuations and extensively cultivated areas often do not secure an adequate supply. Therefore healthy and high-performing animals need an additional supply with premium mineral and active substances.

5-Star quality of the SCHAUMANN-Licks:

- Targeted use of especially chosen raw materials
- High availability of the vitamins
- Optimum hardening
- Extraordinary acceptance and easy handling
- Maximum rain stability

SCHAUMANN-licks are fully equipped with minerals, trace elements as well as essential vitamins and each product is specifically adjusted to the requirements of the particular kind of animal. Provision shortfalls are replenished and performance potential of the animals promoted. Especially at high electrolyte losses in the summer and high animal performances the licks effectively secure health and productivity of the animals at pasture and in the stable.

Permanent trials on different praxis farms in different regions of Germany impressively show the performance potential of the SCHAUMANN-licks in the areas effectiveness, palatability and stability regardless of the weather.

SCHAUMANN LICK:

Palatable lick for cattle and cows containing mineral nutrients, trace elements and vitamins.
