

KALBI MILCH CM

Superior milk replacer!

The calves of a herd are the basis of a farm's future. Young calves are very sensitive and, hence, need high quality feedstuffs. KALBI MILCH CM helps through its reliability and safety to maintain a smooth milk feeding period and shortens the calf rearing time.

Characteristics:

- Very carefully chosen raw materials - low fibre level is the proof for high digestibility.
- Use of highly digestible protein sources allows the reduction of the crude protein level to ensure a trouble free milk feeding
- All essential vitamins, trace elements and minerals are added at a high level.
- Through the use of an acid additional protection and simpler use are guaranteed (mixing and feeding temperature are more flexible).
- The probiotic Provita-LE supports the digestive system and improves daily gain and feed conversion rate.

Feeding plan for calf rearing: (data per calf and day)

| age of the calf | colostrum (l) | KALBI-FERM (g) | water (l) | KALBI MILCH CM, (g) |
|--|------------------|-------------------|--------------|------------------------|
| 1 st meal | 2 | 50 | -- | -- |
| 1 st week | 4 | -- | -- | -- |
| 2 nd week | -- | -- | 5 | 500 - 625 |
| 3 rd - 8 th week | -- | -- | 8 | 800 - 1,000 |
| 9 th week | -- | -- | 6 | 600 - 750 |
| 10 th week | -- | -- | 2 | 200 - 250 |

Application:

- 100- 125g KALBI MILCH CM mixed into 1 l of water (30- 40°C)
- Feeding temperature: 30- 40°C.
- Automat capable!

KALBI MILCH CM

Milk replacer at its best!
