

## Piglet rearing with SCHAUMALAC F80M

### The new way into piglet feeding!

The new piglet rearing product SCHAUMALAC F80M is equipped with our probiotic BONVITAL and provides an optimal supply of nutrients for piglets from the suckling phase on. They all contain performance building blocks for a secure weaning.

SCHAUMALAC F80M contains all essential trace elements and vitamins adjusted to the requirement of the piglets.

There are special SCHAUMALAC F80M mixtures that are adjusted for rations with high contents of maize especially in the four amino acids lysine, methionine, threonine and tryptophan. They are a 100 % digestible and due to their high dosage they provide a good protein quality and assure an optimal protein supply.

BONVITAL stabilises digestion and, hence, increases performance in piglet rearing in a natural way.

SCHAUMALAC piglet products have an intensive aroma to increase feed acceptance and contain a special acid complex to enhance feed intake and feed conversion efficiency.

#### SCHAUMALAC F80M convinces through:

- Good feed intake and best feed efficiency
- High growth performances in all phases of piglet rearing
- Additional security in the weaning phase
- Lower feed input and feed costs
- Vital and equal developed piglets

#### SCHAUMALAC F80M

Mineral feed for performance enhancing piglet rations; the new way forward in piglet feeding, for highest security and performance in rearing.
