

SCHAUMALAC F TOP FIVE PROTECT

For a safe and high performance feed

SCHAUMALAC F TOP FIVE PROTECT offers high security for piglet feed mixtures. The performance strong mineral feed is suited for all phases of piglet rearing.

SCHAUMALAC F TOP FIVE PROTECT contains all essential trace elements and vitamins adjusted on the amount of young piglets.

The equipment with five amino acids – lysine, methionine, threonine, tryptophan and valin – in 100 % digestibility and high dosage secures a high protein quality and guarantee an ideal protein supply. The main function of valin, the fifth limiting amino acid, is the accretion of body mass.

The combination of BONVITAL, phytase and NSP-enzymes offer a high safety. Hence, feed intake is increased and nutrient utilization of the feed is improved. A further increase of feed intake and conversion is reached via a special effective acid complex and feed acceptance is promoted by an intense aroma. Digestion of piglets is stabilized and growth performance improved

SCHAUMALAC F TOP FIVE PROTECT convinces in piglet rearing through:

- High feed intake and best feed efficiency,
- Additional security after weaning and stable health during rearing
- Strong uniform growth in all phases of piglet rearing

Table 1: piglet rearing trial at the farm Brügel with and without valin:
(starting weight 7.8 kg, duration of trial: 26 days, 39 animals per group)

		control	VALIN	
gains	g/day	334	371	+ 10,9 %
feed conversion	1:	1,64	1,57	- 4,3 %

Use:

- At same content of crude protein to secure performance
- For crude protein reduction at same performance

SCHAUMALAC F TOP FIVE PROTECT

For healthy growing piglets!
