

Sow feeding with SCHAUMALAC

More piglets with SCHAUMALAC ZT 40 and SCHAUMALAC ZL 60 the premium mineral feed mixtures for sows

Maximum milk production for best piglet growth, fertile and long-living sows with best constitution – these goals of piglet rearing can only be reached with a special feeding concept.

They contain BONVITAL the probiotic of SCHAUMANN that stabilises the gut micro flora and promotes the utilisation of feed nutrients.

They contain AKTIPHOS the active substance combination of SCHAUMANN which assures a highly efficient nutrient utilisation and, therefore, leading to higher piglet weights and less underweight piglets.

SCHAUMALAC ZT 40

- Mineral feed for gestating sows

The increased equipment with lysine aids the development of the sow and increases the protein reserves of the sow. The adjusted equipment with minerals and the use of phytase disburden the sow's metabolism during gestation. Vitamin content is especially targeted towards an ideal development of the foetuses.

Dosage: 3 % in complete feed

Figure 1: Feed curve during gestation

SCHAUMALAC ZL 60

- Mineral feed for lactating sows

The adjusted supplementation with the three amino acids lysine, methionine and threonine support milk production. The availability of mineral nutrients is enhanced by the use of phytase. Vitamins are added on a high level to support the immune system. Therewith best milk yields can be reached without great weight losses and a high fertility and lifetime productivity can be ensured.

Dosage: 3.5 % in complete feed
